

# **PRACTICAL FILE**

## **WEB TECHNOLOGIES**

### **(IT302)**

Program Name: B. Tech

Semester: 6<sup>th</sup>

Batch: 2019-23

**DEPARTMENT OF INFORMATION TECHNOLOGY**  
**AMITY SCHOOL OF ENGINEERING AND TECHNOLOGY**  
**AMITY UNIVERSITY UTTAR PRADESH**

Faculty:

**Ms Anjali Kapoor**

By

**Gaurav Singh,**

A2305319064

B. Tech 6IT-2X

## INDEX

Practical No.	Name of Experiment	Date of Allotment of experiment	Date of Evaluation	Max Marks	Marks Obtained	Faculty Signature
1.	To create a simple html file to demonstrate the use of different tags.	5/1/22		1		
2.	To create an html file to link to different html page which contains images, tables, and link within a page.	5/1/22		1		
3.	To create an html page with different types of frames such as floating frame, navigation frame & mixed frame.	12/1/22		1		
4.	To create a registration form as mentioned.	12/122		1		
5.	Create an HTML file and use inline, internal, and external CSS.					
6.	Create a form using HTML form tag.	19/1/22		1		
7.	Create an XML file with XML Schema Definition and style it with external CSS.	09/2/22		1		
8.	Creating and Initializing Arrays of fruits in JavaScript and display the same.	16/2/22		1		
9.	Write a script to sort an array of books names. Also sort an array of book prices. Write an appropriate code.	16/2/22		1		
10.	Write a script to create a Form Using JavaScript.	23/2/22		1		
11.	Write A Program to get browser details through JavaScript.	23/2/22		1		
12.	Write A Program in JavaScript to create a form to input Username, Password and Age.	09/3/22		1		
13.	Create a Calculator using JavaScript.	09/3/22		1		
14.	Create a Quiz using HTML forms and JavaScript.	16/3/22		1		
15.	Write a JSP script to show the use of JSP implicit objects.	23/3/22		1		
16.	Create a PHP script to 1) Print Sum of Digits 2) Check whether number is Prime or Non-prime	30/3/22		1		
17.	Create an eCommerce site using PHP & MySQL	13/4/22		1		

# Experiment 1

**Objective:** To create a simple html file to demonstrate the use of different tags.

**Software Used:** Visual Studio Code

## **Program:**

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <meta http-equiv="X-UA-Compatible" content="IE=edge">

    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <title>LAB 1 - 5/1/22</title>

</head>

<body>

    <marquee>Basic HTML Tags</marquee>

    <hr>

    <center style="color: #0000FF;">Heading '&lth1&gt;', '&lth2&gt;', '&lth3&gt;', '&lth4&gt;',
'&lth5&gt;', '&lth6&gt;' Tags
    </center>

    <h1>Heading H1</h1>

    <h2>Heading H2</h2>

    <h3>Heading H3</h3>

    <h4>Heading H4</h4>

    <h5>Heading H5</h5>

    <h6>Heading H6</h6>

    <hr>

    <center style="color: #0000FF;">Text '&ltp&gt;' Tag</center>

    <p>Paragraph</p>

    <!-- Horizontal Rule -->

    <hr>

    <!-- Line Break -->
```

<center style="color: #0000FF;">Line Break '<ltbr>' Tag</center><br>

This is a long piece of text consisting of three<br>

sentences and shows you the functions of the<br>

Line Break tag. This tag is used quite frequently<br>

to add line breaks in the HTML code. It is also used<br>

to add blank lines to a document.<br>

<hr>

<!-- Block Quote -->

<center style="color: #0000FF;">Block Quote '<ltblockquote>' Tag</center><br>

<p>This is some text before the quotation.</p>

<blockquote style="background-color: aliceblue;">"This is a long blockquote created with the  
<blockquote> blockquote

tag."</blockquote>

</blockquote>

<hr>

<!-- Pre Tag -->

<center style="color: #0000FF;">Pre '<ltpre>' Tag</center><br>

<pre>

IT 302 Web Technologies

IT307 Exploring the Networks

</pre>

<hr>

<!-- Logical Style Tags -->

<center style="color: #0000FF;">Logical Style '<ltb>', '<ltbig>', '<lti>', '<ltsmall>',

'<ltsub>', '<lttt>', '<ltu>' Tags</center><br>

<p>This is <b>bold</b>.</p>

<p>This is <big>big font</big>.</p>

<p>This is <i>italic</i>.</p>

<p>Was <s>\$50</s>; now \$40.</p>

<p>This is <small>small</small>.</p>

<p>H<sub>2</sub>O</p>

<p>May 5<sup>th</sup> 2005</p>

<p><tt>fixed-width font</tt></p>

<p>This is <u>underlined</u>.</p>

<hr>

<center style="color: #0000FF;">Physical Style '&ltcite&gt;', '&ltcode&gt;', '&ltdel&gt;',  
'&ltdfn&gt;', '&ltitem&gt;',

'&ltins&gt;', '&ltkbd&gt;', '&ltsamp&gt;', '&ltstrong&gt;', '&ltvar&gt;' Tags</center><br>

This is used for a short <cite>quote</cite>. This is used for a short quote.<br>

<p><code>y = m \* x + b</code></p>

<p><del>Deleted</del> text Deleted text</p>

<p><dfn>definition</dfn> text definition text</p>

<p>This is <em>emphasized </em>.</p>

<p><ins>inserted</ins> text inserted text</p>

<p><kbd>code</kbd> sample code sample</p>

<p><samp>code</samp> sample code sample</p>

<p>This is <strong>strong</strong>. This is strong.</p>

<p><var>program</var> variable program variable</p>

<hr>

<!-- Unordered List -->

<center style="color: #0000FF;">Listing Style '&ltol&gt;', '&ltli&gt;', '&ltul&gt;' Tags</center><br>

<h4>Numbered list:</h4>

<ol>

<li>Apples</li>

<li>Bananas</li>

<li>Lemons</li>

<li>Oranges</li>

</ol>

<h4>Letters list:</h4>

<ol type="A">

```

<dt>Coffee</dt>

<dd>Black hot drink</dd>

<dt>Milk</dt>

<dd>White cold drink</dd>

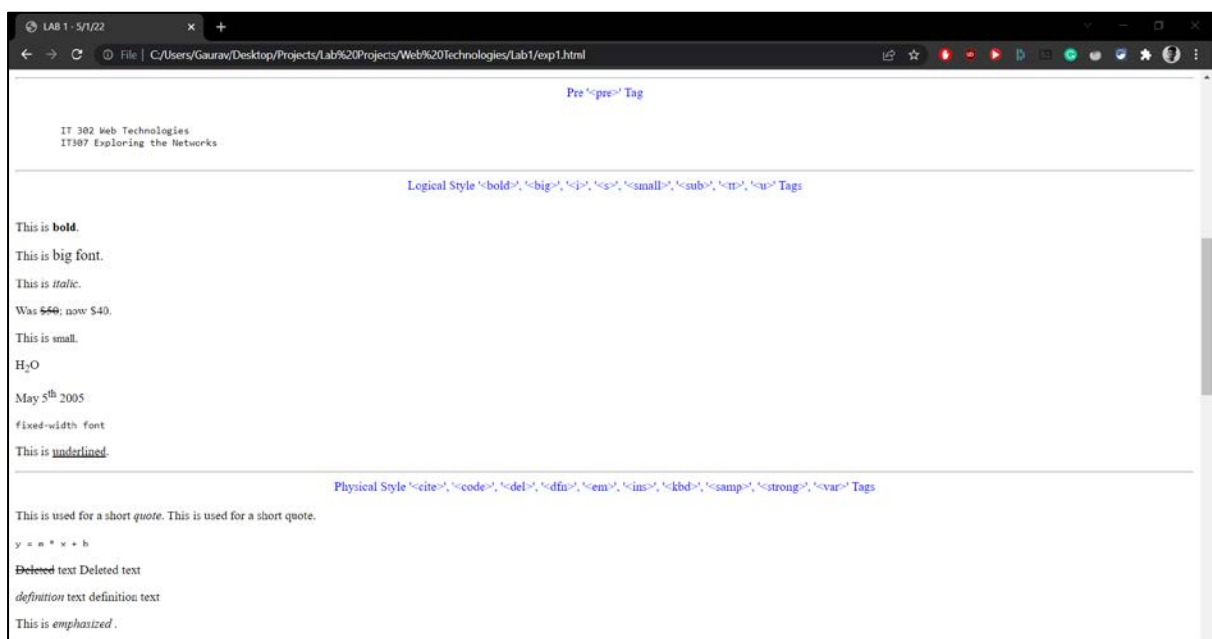

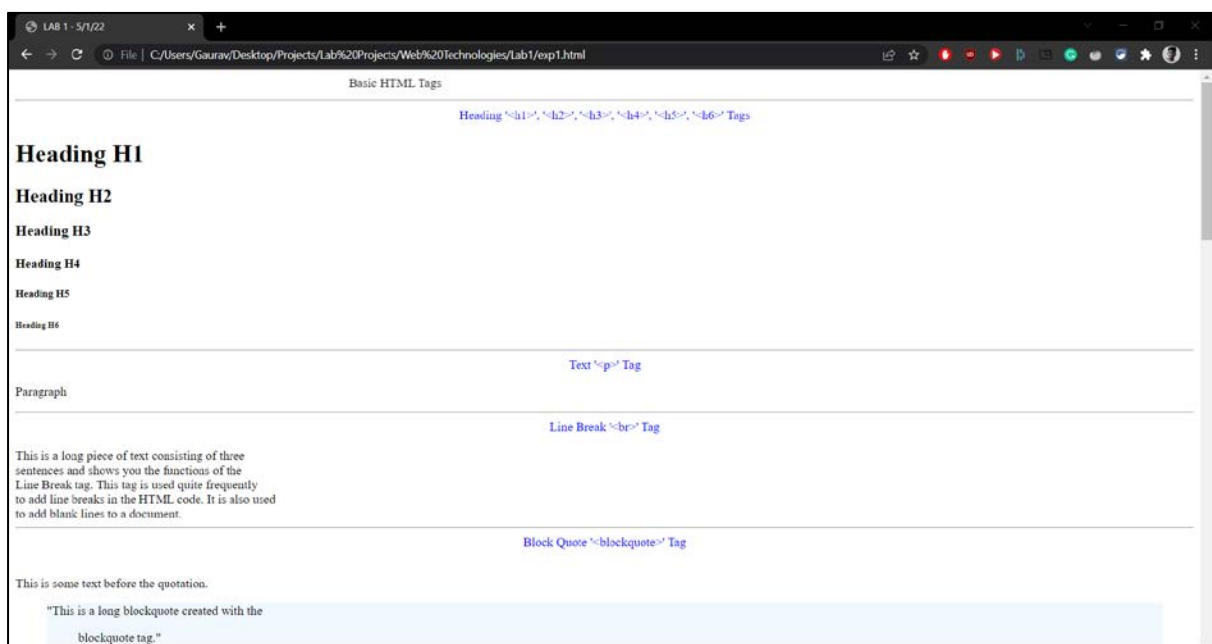

</dl>

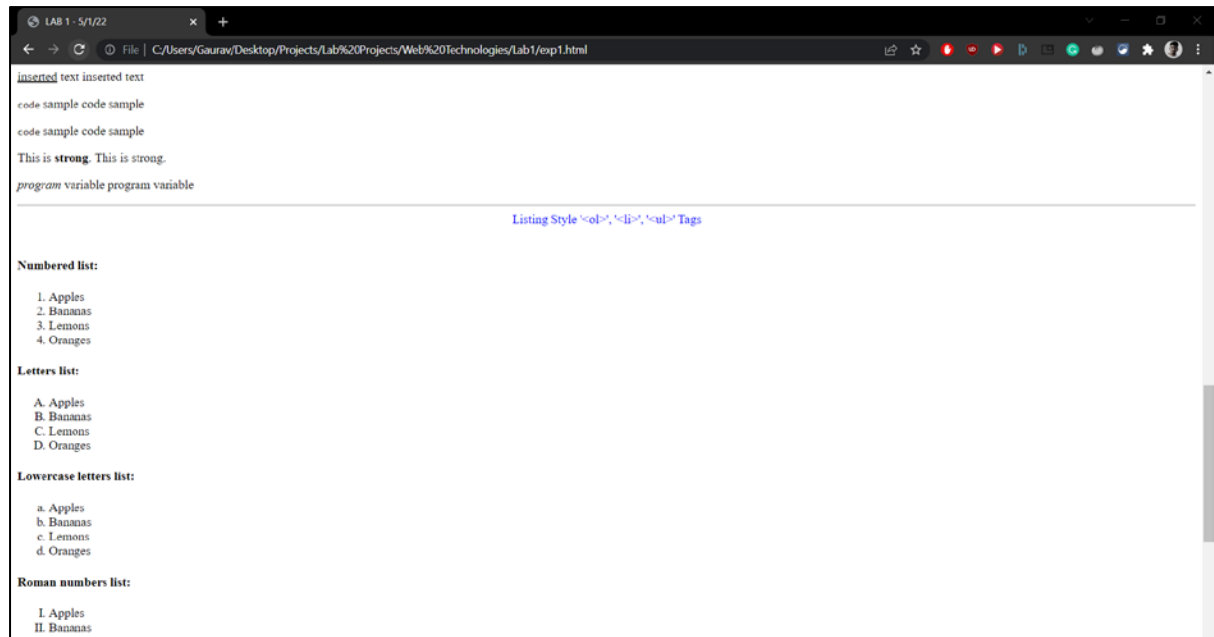

<hr>

</body>

</html>

## Output:

## Conclusion:

Hence, we have successfully demonstrated the use of different HTML tags.

## Experiment 2

**Objective:** To create an html file to link to different html page which contains images, tables, and link within a page.

**Software Used:** Visual Studio Code

### **Program:**

#### **1) index.html**

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <meta http-equiv="X-UA-Compatible" content="IE=edge">

    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <title>LAB 1 (Exp 2) - 5/1/22</title>

</head>

<body>

    <h1>

        <center style="color: #0000FF;">Menu</center>

    </h1>

    <ul type="disc">

        <li><a href="/Lab Projects/Web Technologies/Lab1/table.html">Table</a></li>

        <li><a href="/Lab Projects/Web Technologies/Lab1/image.html">Image</a></li>

        <li><a href="/Lab Projects/Web Technologies/Lab1/video.html">Video</a></li>

    </ul>

    <br>

</body>

</html>
```

#### **2) table.html**

```
<!DOCTYPE html>

## **Experiment 3**

**Objective:** To create an html page with different types of frames such as floating frame, navigation frame & mixed frame.

**Software Used:** Visual Studio Code

### **Program:**

#### **1) index.html**

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <meta http-equiv="X-UA-Compatible" content="IE=edge">

    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <title>Navigation Frame</title>

</head>

<frameset cols="25%,75%">

    <frame name="frame1" src="menu.html" noresize>

    <frame name="frame2" src="registration.html" noresize>

</frameset>

</html>
```

#### **2) frame.html**

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <meta http-equiv="X-UA-Compatible" content="IE=edge">

    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <title>Frame</title>

</head>
```

```
<!-- <iframe src="index.html" name="iframe1" id="iframe1" width="350" height="200"
align="left"></iframe> -->
```

```
<frameset cols="20%,35%">
```

```
    <frame src="img1.jpg"></frame>
```

```
    <frame src="img2.jpg"></frame>
```

```
</frameset>
```

```
</html>
```

### 3) iframe.html

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
    <meta charset="UTF-8">
```

```
    <meta http-equiv="X-UA-Compatible" content="IE=edge">
```

```
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
```

```
    <title>Floating Frame</title>
```

```
</head>
```

```
<body>
```

```
    <iframe src="img3.jpg" frameborder="0" width="500px" height="500px"></iframe>
```

```
    <p>Lorem ipsum dolor sit amet consectetur, adipisicing elit. Quisquam, perferendis doloremque
pariatur, quibusdam
```

```
        nesciunt odio ullam maxime repudiandae, sint excepturi quos ipsum. Harum quos asperiores iure,
excepturi totam
```

```
        quisquam sed!</p>
```

```
</body>
```

```
</html>
```

**Output:**

Navigation Frame   Frame   Floating Frame

File | C:/Users/Gaurav/Desktop/Projects/Lab%20Projects/Web%20Technologies/Lab2/index.html

### Experiments 12-1-22

- Home
- frameset
- iframe
- Form

## Registration Form

Enter your Name:

Enter your age:

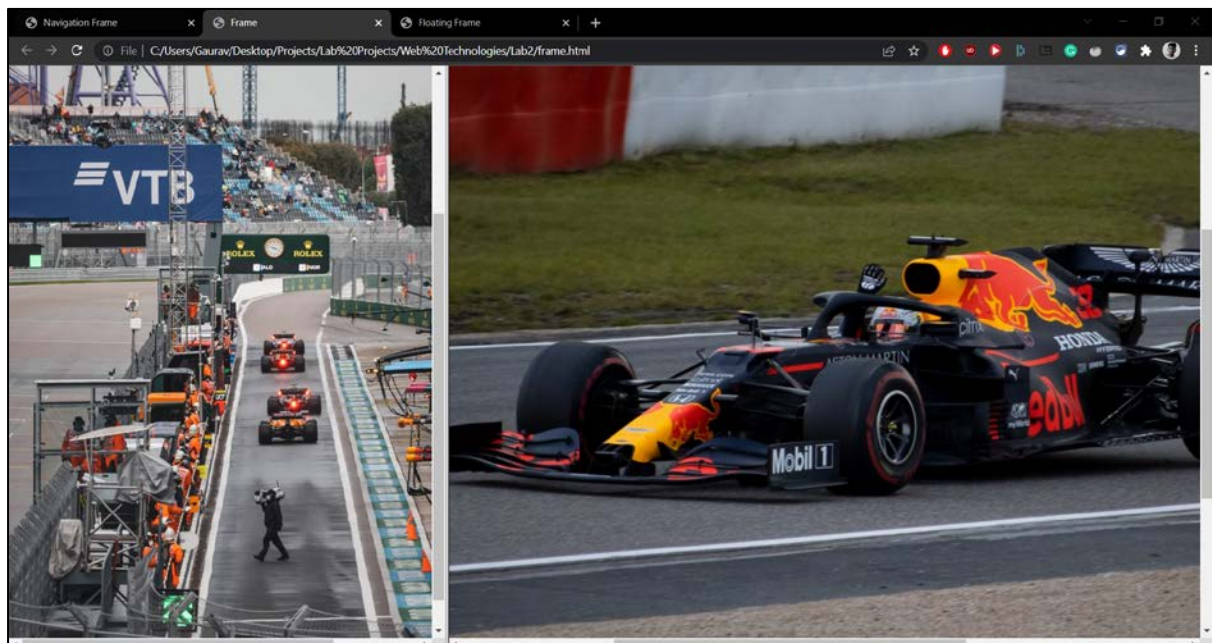

Enter your address:

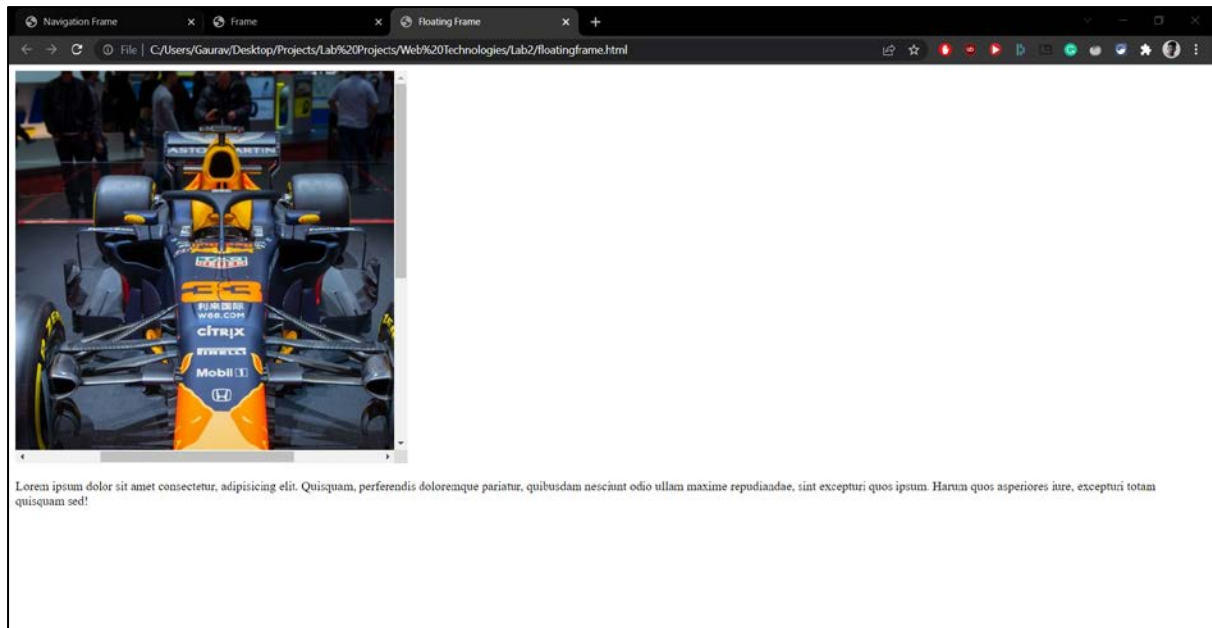

Select your gender: ☐ Male ☐ Female

Familiar Programming Languages:

- ☐ C
- ☐ C++
- ☐ JAVA
- ☐ ASP
- ☐ OTHERS

Enter your password:

## Conclusion:

Hence, we have successfully demonstrated the use of different frame tags in HTML.

## Experiment 4

**Objective:** To create a registration form as mentioned below.

Procedure:

Create an html page named as “registration.html”

- a) set background colors
- b) use table for alignment
- c) provide font colors & size

**Software Used:** Visual Studio Code

### **Program:**

#### **1) registration.html**

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Registration Form</title>
  <style>
    * {
      box-sizing: border-box;
      background-color: aliceblue;
      font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
    }
    .button {
      color: white;
      background-color: black;
      margin: 0 10px;
      padding: 5px 10px;
    }
  </style>
</head>
<body>
```

```

    input {
        border: 0.5px solid gray;
    }
</style>
</head>
<body>
    <center>
        <h1>Registration Form</h1>
        <form action="">
            <table cellpadding=20px>
                <tr>
                    <td>Enter your Name: </td>
                    <td><input type="text" placeholder="Tony Soprano"></td>
                </tr>
                <tr>
                    <td>Enter your age: </td>
                    <td><input type="number" maxlength="80" minlength="18" placeholder="18+"></td>
                </tr>
                <tr>
                    <td>Enter your address: </td>
                    <td><textarea rows=5 cols=22></textarea></td>
                </tr>
                <tr>
                    <td>Select your gender: </td>
                    <td>
                        <input type="radio" name="gender" id="" value="male">Male
                        <input type="radio" name="gender" id="" value="female">Female
                    </td>
                </tr>
                <tr>
                    <td>Familiar<br>Programming<br>Languages: </td>
                    <td>

```

```

<input type=checkbox name=c1 value=c>C<br>
<input type=checkbox name=c2 value=c++>C++<br>
<input type=checkbox name=c4 value=java>JAVA<br>
<input type=checkbox name=c5 value=asp>ASP<br>
<input type=checkbox name=c6 value=others>OTHERS<br>
</td>
</tr>
<tr>
<td>Enter your password: </td>
<td><input type="password" name="pass" id="" placeholder="$trong Pa$$word"></td>
</tr>
</table>
<div style="padding-top: 20px;">
<input class="button" type="reset">
<input class="button" type="submit">
</div>
</form>
</center>
</body>
</html>

```

## Output:

The screenshot shows a web browser window with the title 'Registration Form'. The address bar shows the file path: C:/Users/Gaurav/Desktop/Projects/Lab%20Projects/Web%20Technologies/Lab2/registration.html. The form itself is centered on a light blue background and contains the following elements:

- Registration Form** (Section Header)
- Enter your Name:** Text input field with 'Tony Soprano' entered.
- Enter your age:** Text input field with '18+' entered.
- Enter your address:** Text area input field.
- Select your gender:** Radio buttons for 'Male' and 'Female'.
- Familiar Programming Languages:** A list of checkboxes for 'C', 'C++', 'JAVA', 'ASP', and 'OTHERS'.
- Enter your password:** Password input field with placeholder text '\$trong Pa\$\$word'.
- Buttons:** 'Reset' and 'Submit' buttons at the bottom.

## Experiment 5

**Objective:** Create an HTML file and use inline, internal, and external CSS.

**Software Used:** Visual Studio Code

### **Program:**

#### **1) index.html**

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta http-equiv="X-UA-Compatible" content="IE=edge">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <link rel="stylesheet" href="external_css.css">

  <title>Lab 3 - 19/1/22</title>

  <style>

    body {

      background-color: lightgrey;

    }

  </style>

</head>

<body>

  <h2>Web Technologies Lab 3 - 19/1/22</h2>

  <hr>

  <p>

    Lorem ipsum dolor sit amet consectetur adipisicing elit. Veritatis voluptatum consectetur beatae tempore quae libero similique minus amet nostrum asperiores, nemo accusantium facere inventore facilis! Quisquam voluptatum dignissimos nam. Tempore.

  </p>

  <div class="button">

    <a href="https://amizone.net" target="blank">
```

```
        style="border-top: 3px solid #00509d; border-left: 3px solid #00509d;">Go to Amizone</a>
    </div>
</body>
</html>
```

## 2) external\_css.css

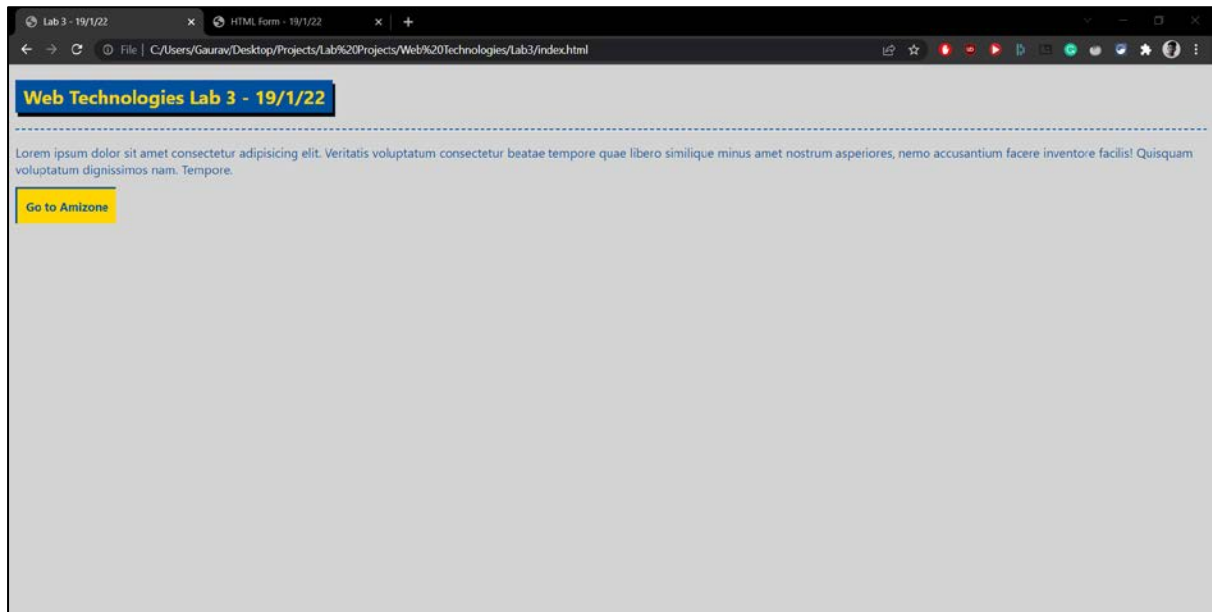

```
*{
    font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
}
h2{
    background-color: #00509d;
    width: fit-content;
    color: #ffd500;
    padding: 5px 10px;
    box-shadow: 3px 5px black;
}

p{
    color: #00509d;
}
.button{
    margin-top: 25px;
}
a{
    text-decoration: none;
    background-color: #ffd500;
    padding: 12px 10px;
    color: #00509d;
    font-size: 15px;
    font-weight: bold;
    border: 0;
}
a:hover{
```

```
    animation: ease-in 0.1s;
    box-shadow: 3px 5px #00509d;
}
hr{
    border-top: 2px dashed #00509d;
}
```

## Output:

## Conclusion:

Hence, we have successfully created an HTML file and demonstrated the use of inline, internal, and external CSS.

## Experiment 6

**Objective:** Create a form using HTML form tag.

**Software Used:** Visual Studio Code

### **Program:**

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <meta http-equiv="X-UA-Compatible" content="IE=edge">

    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <title>HTML Form - 19/1/22</title>

    <style>

        * {

            font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;

        }

        body {

            background-color: lightblue;

        }

        form div {

            margin: 20px 0;

        }

        div div {

            margin: 0;

        }

    </style>

</head>

<body>

    <h1>Registration Form</h1>

    <form action="">
```

```
<div>

  <label>First Name:</label>

  <input type="text" placeholder="Gaurav">
</div>

<div>

  <label>Middle Name:</label>

  <input type="text">
</div>

<div>

  <label>Last Name:</label>

  <input type="text" placeholder="Singh">
</div>

<div>

  <label for="">Course</label>

  <select name="languages" id="lang" placeholder="Course">

    <option value="course">Course</option>

    <option value="btech">B.Tech</option>

    <option value="bba">BBA</option>

    <option value="ba">BA</option>

    <option value="ballb">BA LLB</option>

    <option value="bcom">B.Com</option>

  </select>
</div>

<div>

  <label for="">Gender</label>

  <div>

    <input type="radio" name="gender" id="">

    <label for="">Male</label>
  </div>

  <div>

    <input type="radio" name="gender" id="">

    <label for="">Female</label>
  </div>
</div>
```

```
</div>

<div> <input type="radio" name="gender" id="">
    <label for="">Other</label>
</div>
</div>
<div>
    <label for="">Phone</label>
    <input type="text" name="country code" value="+91" size="2" />
    <input type="number" name="" id="">
</div>
<div>
    <label for="">Address</label>
    <br>
    <textarea cols="80" rows="5" value="address"></textarea>
</div>
<div>
    <label for="">E-mail</label>
    <input type="email" name="" id="" placeholder="gaurav@email.com">
</div>
<div>
    <label for="">Password</label>
    <input type="password" name="" id="" placeholder="$trongPa$$">
</div>
<div>
    <label for="">Re-Password</label>
    <input type="password" name="" id="" placeholder="$trongPa$$">
</div>
<button>Submit</button>
</form>
</body>
</html>
```

## Output:

The screenshot shows a web browser window with the title 'HTML Form - 19/1/22'. The address bar shows the file path 'C:/Users/Gaurav/Desktop/Projects/Lab%20Projects/Web%20Technologies/Lab3/form.html'. The form itself is titled 'Registration Form' and contains the following fields and controls:

- First Name:
- Middle Name:
- Last Name:
- Course:
- Gender:
  - ☐ Male
  - ☐ Female
  - ☐ Other
- Phone:
- Address:
- E-mail:
- Password:
- Re-Password:
- 

## Conclusion:

Hence, we have successfully created an form using HTML form tag.

## Experiment 7

**Objective:** Create an XML file with XML Schema Definition and style it with external CSS.

**Software Used:** Visual Studio Code

### **Program:**

#### **1) student.xml**

```
<?xml version="1.0" encoding="UTF-8"?>
<?xml-stylesheet type="text/css" href="xmlstyles.css"?>
<ss:student
  xmlns:ss="."
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:SchemaLocation="./ student.xsd"
> <name>Gaurav Singh</name>
  <semester>6IT</semester>
  <section>2X</section>
  <rollnum>9064</rollnum>
  <body>3rd year undergrad</body>
  <college>ASET</college>
</ss:student>
```

#### **2) student.xsd**

```
<?xml version="1.0" encoding="UTF-8"?>
<xs:schema
  xmlns:xs="http://www.w3.org/2001/XMLSchema"
  targetNamespace="."
  xmlns="."
  elementFormDefault="qualified"
>
  <xs:simpletype name="semesterType">
    <xs:restriction base="xs:string">
      <xs:pattern value="[1-8][A-Z][A-Z][A-Z]" />
    </xs:restriction>
  </xs:simpletype>
```

```

        </xs:restriction>
    </xs:simpletype>
    <xs:simpletype name="sectionType">
        <xs:restriction base="xs:string">
            <xs:pattern value="[1-10][XY]"/>
        </xs:restriction>
    </xs:simpletype>
    <xs:simpletype name="collegeType">
        <xs:restriction base="xs:string">
            <xs:enumeration value="ASET"/>
            <xs:enumeration value="AIP"/>
            <xs:enumeration value="ALS"/>
            <xs:enumeration value="ASAP"/>
        </xs:restriction>
    </xs:simpletype>
    <xs:complextype name="studentType">
        <xs:sequence>
            <xs:element name="name" type="xs:string"/>
            <xs:element name="semester" type="semesterType"/>
            <xs:element name="section" type="sectionType"/>
            <xs:element name="rollnum" type="xs:integer"/>
            <xs:element name="body" type="xs:string"/>
            <xs:element name="college" type="collegeType"/>
        </xs:sequence>
    </xs:complextype>
    <xs:element name="student" type="studentType"/>
</xs:schema>

```

### 3) xmlstyles.css

```

*{
    display: block;
    font-size: 20px;
    width: 250px;
}

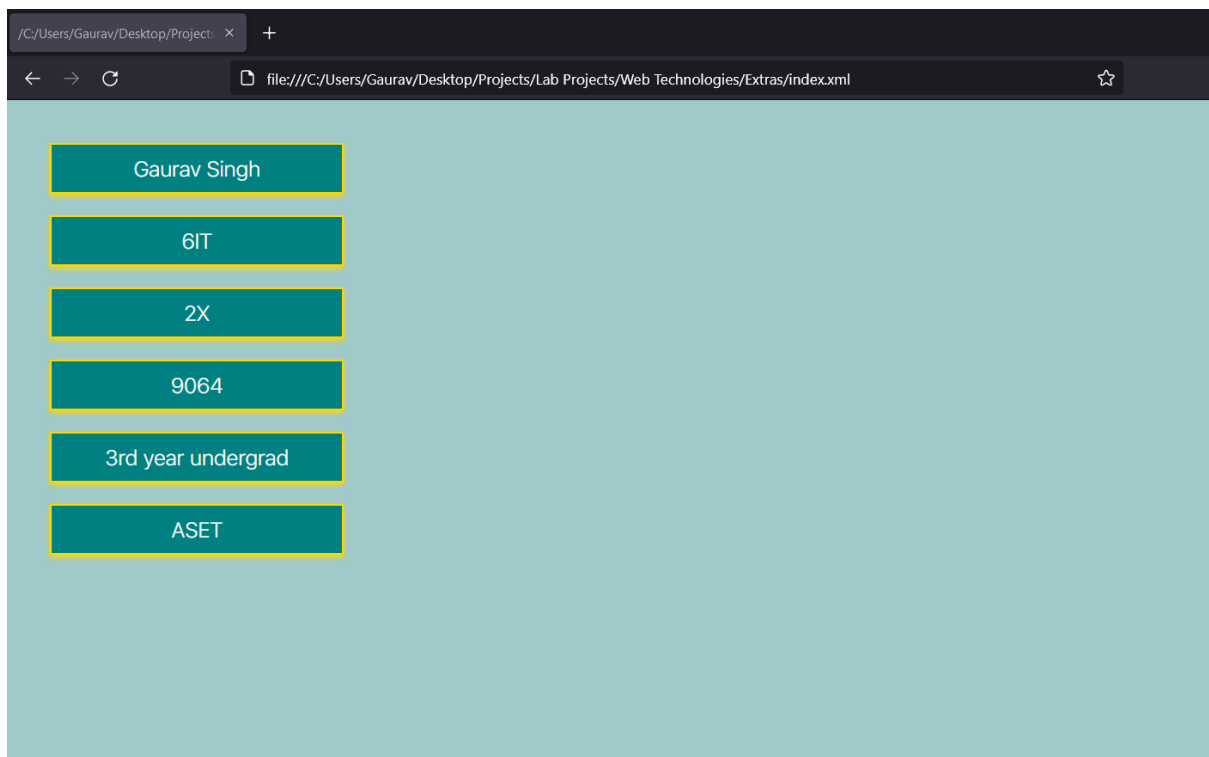

```

```

margin: 20px;
}
name, semester, section, rollnum, body, college{
padding: 10px;
border: 2px solid gold;
color: whitesmoke;
font-family: sans-serif;
font-weight: 200;
background-color: teal;
box-shadow: 0px 2px 5px gold;
text-align: center;
}
student{
/* width: fit-content;
padding: 20px 0; */
background-color: rgb(160, 201, 201);
/* box-shadow: 10px 5px teal; */
}

```

## Output:

## Experiment 8

**Objective:** Creating and Initializing Arrays of fruits in JavaScript and display the same.

- a. Extracts the last element of the array and returns it
- b. Append the element to the end of the array:
- c. Extracts the first element of the array and returns it:
- d. Add the element to the beginning of the array

**Software Used:** Visual Studio Code

### **Program:**

#### **1) File – index.html**

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Lab 5 - 9/2/22</title>
</head>

<body>
  <input type="text" name="input" id="input">
  <button onclick="appendEle()">Append</button>
  <button onclick="extractLast()">Extract Last</button>
  <button onclick="prependEle()">Prepend</button>
  <button onclick="extractFirst()">Extract First</button>
  <h1 id="arr"></h1>

  <h3 id="ele"></h3>

  <script>
    var arr = [];

    function appendEle() {
      var data = document.getElementById("input").value;
      arr.push(data);
      var op = "After Append Arr = ";
      for (let i = 0; i < arr.length; i++) {
        op += arr[i];
        op += ", "
      }
      document.getElementById("arr").innerHTML = op;
    }
  </script>
</body>
</html>
```

```

function extractLast() {
    var op = arr[arr.length - 1];
    if (op === undefined) {
        document.getElementById("ele").innerHTML = "Cannot extract last element, Array is
empty!";
    }
    else {
        document.getElementById("ele").innerHTML = "Last element is " + op;
    }
}

function prependEle() {
    var data = document.getElementById("input").value;
    var new_arr = [data].concat(arr);
    arr = new_arr;
    var op = "After Prepend Arr = ";
    for (let i = 0; i < arr.length; i++) {
        op += arr[i];
        op += ", "
    }
    document.getElementById("arr").innerHTML = op;
}

function extractFirst() {
    var op = arr[0];
    if (op === undefined) {
        document.getElementById("ele").innerHTML = "Cannot extract first element, Array is
empty!";
    }
    else {
        document.getElementById("ele").innerHTML = "First Element = " + op;
    }
}

</script>
</body>
</html>

```

**Output:**

Lab 5 - 9/2/22 x +

← → ↻ ⓘ 127.0.0.1:5500/Lab%20Projects/Web%20Technologies/Lab5/index.html

Grapes Append Extract Last Prepend Extract First

**After Append, Arr = Mango, Banana,**

Lab 5 - 9/2/22 x +

← → ↻ ⓘ 127.0.0.1:5500/Lab%20Projects/Web%20Technologies/Lab5/index.html

Grapes Append Extract Last Prepend Extract First

**After Prepend, Arr = Grapes, Mango, Banana,**

**Last element is = Banana**

Lab 5 - 9/2/22 x +

← → ↻ ⓘ 127.0.0.1:5500/Lab%20Projects/Web%20Technologies/Lab5/index.html

Apple Append Extract Last Prepend Extract First

**After Prepend, Arr = Apple, Grapes, Mango, Banana,**

**First Element = Grapes**

### Conclusion:

Hence, we have successfully created and initialized an array in JavaScript and performed appending, prepending, extracting first element & extracting last element operations on the array.

## Experiment 9

**Objective:** Write a script to sort an array of books names. Also sort an array of book prices. Write an appropriate code.

**Software Used:** Visual Studio Code

### **Program:**

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Lab 6 - 16/2/22</title>
</head>

<body>
  <input type="text" name="input" id="input">
  <button onclick="appendEle()">Append</button>
  <button onclick="printArr()">Print Arr</button>
  <button onclick="sortByName()">Sort by Name</button>
  <button onclick="sortByPrices()">Sort by Prices</button>
  <h1 id="operation"></h1>

  <h3 id="arr"></h3>

  <script>
    var arr = [["Harry Potter and the Half Blood Prince", 900], ["Zero to One", 250], ["The brief history of time", 500], ["The Intelligent Investor", 600]];

    function printArr(arr1 = arr) {
      var op = "";
      for (let i = 0; i < arr1.length; i++) {
        op += arr1[i];
        op += "<br> "
      }
      document.getElementById("arr").innerHTML = op;
    }

    function appendEle() {
      var data = document.getElementById("input").value.split(",");
      arr.push([data[0], parseInt(data[1])]);
      printArr();
    }

    function sortByName() {
      var sortedArr1 = arr.sort(function (a, b) {
```

```

        var nameA = a[0].toLowerCase(), nameB = b[0].toLowerCase();
        if (nameA < nameB)
            return -1;
        else if (nameA > nameB)
            return 1;
        else
            return 0;
    });

    console.log(sortedArr1);
    document.getElementById("operation").innerHTML = "After Sorting by name, Arr = ";
    printArr(sortedArr1);
}

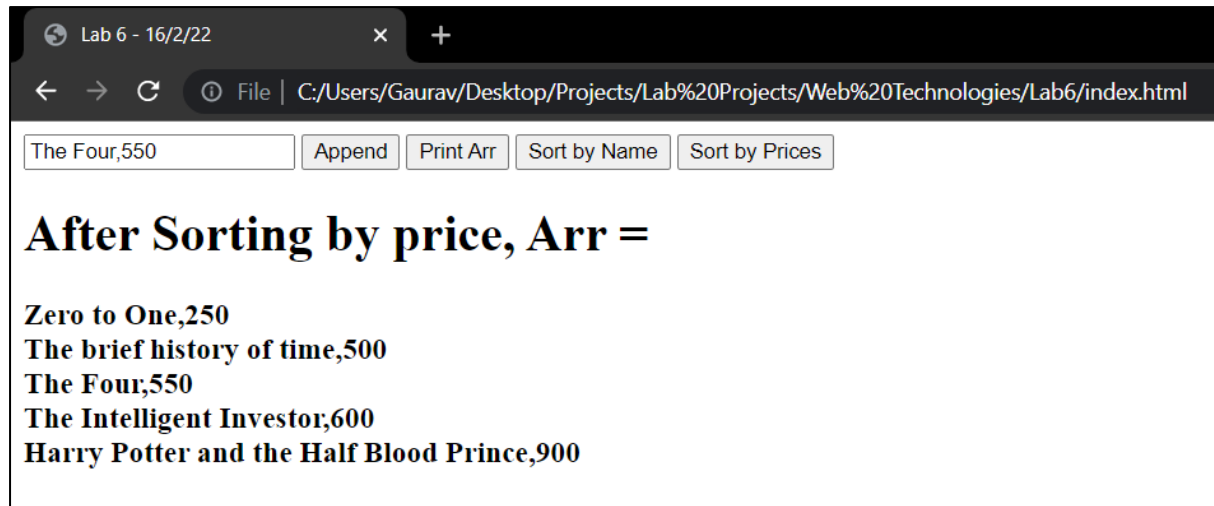

function sortByPrices() {
    var sortedArr2 = arr.sort(function (a, b) {
        return a[1] - b[1];
    });

    console.log(sortedArr2);
    document.getElementById("operation").innerHTML = "After Sorting by price, Arr = ";
    printArr(sortedArr2);
}
</script>
</body>
</html>

```

## Output:

### Conclusion:

Hence, we have successfully created script to sort an array of books names. Also sort an array of book prices.

## Experiment 10

**Objective:** Write a script to create a Form Using JavaScript.

**Software Used:** Visual Studio Code

### **Program:**

```
<html>
<head>
<title>Registration Form </title>

</head>

<body bgcolor="turquoise" text="white" style="font-size:20pt;font-family:Arial" ><center>

<h2>Student Detail Form</h2></center>

<center></center>

<form name=form1 >

<table name=tab cellspacing=30pt>

<tr><td align=left><h2>Enter your Name :</h2> </td><td align=right><input type=text
name=t1 size=18>

<tr><td align=left><h2>Enter your Age :</h2> </td><td align=right><input type=text
name=t2 maxlength=3 size=18>

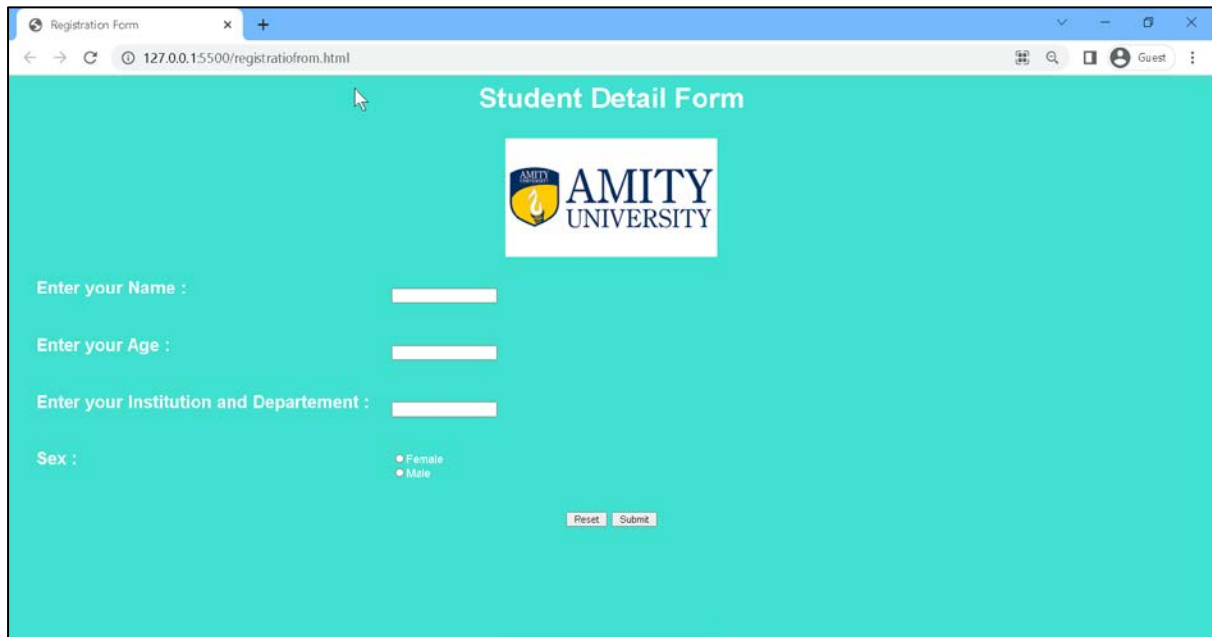

<tr><td align=left><h2>Enter your Institution and Departement :</h2> </td><td
align=right><input type=text name=t2 maxlength=12 size=18>

<tr><td align=left><h2>Sex :</h2> </td><td align=left><input type=radio name=r1
value="female">Female<br>

<input type=radio name=r1 value=male>Male</td>
</table><center>
<input type=reset value=" Reset " >
<input type=submit value=" Submit " >
</form>
</body>
</html>
```

## Output:

The screenshot displays a web browser window with the title 'Registration Form'. The address bar shows the URL '127.0.0.1:5500/registratiofrom.html'. The page content features a teal background with the title 'Student Detail Form' at the top. Below the title is the Amity University logo, which consists of a shield emblem and the text 'AMITY UNIVERSITY'. The form contains the following elements:

- A label 'Enter your Name :' followed by a text input field.
- A label 'Enter your Age :' followed by a text input field.
- A label 'Enter your Institution and Departement :' followed by a text input field.
- A label 'Sex :' followed by two radio buttons: 'Female' and 'Male'.
- At the bottom center, there are two buttons: 'Reset' and 'Submit'.

## Conclusion:

Hence, we have successfully created to create a form using JavaScript.

## Experiment 11

**Objective:** Write a script to get browser details through JavaScript.

**Software Used:** Visual Studio Code

### **Program:**

```
<!DOCTYPE HTML>
<html>
  <head>
    <title>
      Get browser details through JavaScript
    </title>
  </head>
  <body>
    <!-- The text field -->
    <div id="example"></div>
    <script>
      txt = "<p>Browser CodeName: " + navigator.appCodeName + "</p>";
      txt+= "<p>Browser Name: " + navigator.appName + "</p>";
      txt+= "<p>Browser Version: " + navigator.appVersion + "</p>";
      document.getElementById("example").innerHTML=txt;
    </script>
  </body>
</html>
```

### **Output:**

<pre>1 &lt;!DOCTYPE HTML&gt; 2 &lt;html&gt; 3   &lt;head&gt; 4     &lt;title&gt; 5       Get browser details through JavaScript 6     &lt;/title&gt; 7   &lt;/head&gt; 8   &lt;body&gt; 9     &lt;!-- The text field --&gt; 10    &lt;div id="example"&gt;&lt;/div&gt; 11    &lt;script&gt; 12      txt = "&lt;p&gt;Browser CodeName: " + navigator.appCodeName + "&lt;/p&gt;"; 13      txt+= "&lt;p&gt;Browser Name: " + navigator.appName + "&lt;/p&gt;"; 14      txt+= "&lt;p&gt;Browser Version: " + navigator.appVersion + "&lt;/p&gt;"; 15      document.getElementById("example").innerHTML=txt; 16    &lt;/script&gt; 17  &lt;/body&gt; 18 &lt;/html&gt; 19</pre>	<p>Browser CodeName: Mozilla</p> <p>Browser Name: Netscape</p> <p>Browser Version: 5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/100.0.4896.127 Safari/537.36</p>
---	---

### **Conclusion:**

Hence, we have successfully created to create a form using JavaScript.

## Experiment 12

**Objective:** Write a script to create a form to input Username, Password and Age.

**Software Used:** Visual Studio Code

### **Program:**

1. index.html

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <meta http-equiv="X-UA-Compatible" content="IE=edge" />
    <meta name="viewport" content="width=device-width, initial-scale=1.0" />
    <title>Validation</title>
  </head>
  <body>
    <form>
      <label>Username: </label><input type="text" id="name" /><br />
      <label>Password: </label><input type="text" id="password" /><br />
      <label>Age: </label><input type="text" id="age" /><br />
      <button id="btn">Submit</button>
    </form>
    <script src="index.js"></script>
  </body>
</html>
```

2. index.js

```
document.getElementById('btn').addEventListener('click', () => {
  let username = document.getElementById('name').value;
  if (username == "") {
    alert('The username cannot be empty');
  }
  let password = document.getElementById('password').value;
  if (password.length < 6) {
    alert('The password should be atleast 6 characters long');
  }
  let age = parseInt(document.getElementById('age').value);
  if (!(age >= 1 && age <= 19)) {
    alert('Age should be between 1 and 19');
  }
});
```

## Output:

Username:

Password:

Age:

Submit

## Conclusion:

Hence, we have successfully created a form to input Username, Password and Age.

## Experiment 13

**Objective:** Create a Calculator using HTML, CSS and JavaScript.

**Software Used:** Visual Studio Code

### **Program:**

```
<!-- Create a simple Program to build the Calculator in JavaScript using with HTML and
CSS web languages. -->
<!DOCTYPE html>
<html lang = "en">
<head>
<title> JavaScript Calculator </title>

<style>
h1 {
    text-align: center;
    padding: 23px;

    color: rgb(208, 238, 153);
}

#clear{
width: 270px;
border: 3px solid gray;
    border-radius: 3px;
    padding: 20px;
    background-color: rgb(240, 149, 149);
}

.formstyle
{
width: 300px;
height: 530px;
margin: auto;
border: 10px solid rgb(20, 22, 20);
border-radius: 5px;
padding: 20px;
}
input
{
width: 20px;
background-color: rgb(238, 218, 130);
color: rgb(2, 2, 2);
border: 3px solid gray;
    border-radius: 5px;
```

```

padding: 26px;
margin: 5px;
font-size: 15px;
}
#calc{
width: 250px;
border: 5px solid black;
border-radius: 3px;
padding: 20px;
margin: auto;
}
</style>

</head>
<body>
<h1> Calculator using JS </h1>
<div class= "formstyle">
<form name = "form1">

    <!-- This input box shows the button pressed by the user in calculator. -->
    <input id = "calc" type ="text" name = "answer"> <br> <br>

    <input type = "button" value = "4" onclick = "form1.answer.value += '4' ">
    <input type = "button" value = "5" onclick = "form1.answer.value += '5' ">
    <input type = "button" value = "6" onclick = "form1.answer.value += '6' ">
    <input type = "button" value = "-" onclick = "form1.answer.value += '-' ">
    <br> <br>

    <input type = "button" value = "7" onclick = "form1.answer.value += '7' ">
    <input type = "button" value = "8" onclick = "form1.answer.value += '8' ">
    <input type = "button" value = "9" onclick = "form1.answer.value += '9' ">
    <input type = "button" value = "*" onclick = "form1.answer.value += '*' ">
    <br> <br>

    <input type = "button" value = "/" onclick = "form1.answer.value += '/' ">
    <input type = "button" value = "0" onclick = "form1.answer.value += '0' ">
    <input type = "button" value = "." onclick = "form1.answer.value += '.' ">
    <!-- When we click on the '=' button, the onclick() shows the sum results on the calculator
screen. -->

```

```
<input type = "button" value = "=" onclick = "form1.answer.value =  
eval(form1.answer.value) ">  
<br>  
<!-- Display the Cancel button and erase all data entered by the user. -->  
<input type = "button" value = "Clear All" onclick = "form1.answer.value = ' ' " id= "clear"  
>  
<br>  
  
</form>  
</div>  
</body>  
</html>
```

## Output:

## Conclusion:

Hence, we have successfully created a Calculator using HTML, CSS, and JavaScript.

## Experiment 14

**Objective:** Write a script to create a quiz using HTML forms and JavaScript.

**Software Used:** Visual Studio Code

### **Program:**

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
</head>
<body>
  <!-- <form action="/"> -->
    <label for="input1">3+5</label><br>
    <input id="first" type="text" name="input1"><br>

    <label for="input2">4+6</label><br>
    <input id="second" type="text" name="input2"><br>

    <label for="input3">7 X 5</label><br>
    <input id="third" type="text" name="input3"><br>

    <button onclick="check()" type="submit" value="Submit">submit</button>
    <div id="ans"></div>

  <!-- </form> -->

  <script>

    function check(){

      var first=document.getElementById("first").value;
      var second=document.getElementById("second").value;
      var third=document.getElementById("third").value;

      var score=0;

      if(first==8)
        score=score+5;

      if(second==10)
        score=score+5;
```

```
        if(third==35)
            score=score+5;

        console.log(">>>>>>>>>>>>>>>",first,second,third,score);
        document.getElementById("ans").innerHTML = score;
    }
</script>
</body>
</html>
```

**Output:**

The screenshot shows a web browser window with the title "Document". The address bar displays "127.0.0.1:5500/form.html". The page content includes a form with the following elements:

- A text input field containing the number "8", preceded by the text "3+5".
- A text input field containing the number "10", preceded by the text "4+6".
- A text input field containing the number "35", preceded by the text "7 X 5".
- A "submit" button.
- The number "15" is displayed below the input fields.

## Conclusion:

Hence, we have successfully created a script to create a quiz using HTML forms and JavaScript

## Experiment 15

**Objective:** Write a JSP script to show the use of JSP implicit objects.

**Software Used:** Visual Studio Code

### **Program:**

1. index.jsp

```
<!DOCTYPE html>
<!--
To change this license header, choose License Headers in Project Properties.

and open the template in the editor.
-->
<html>
  <head>
    <title>Lab Experiment - 30/3/22</title>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
  </head>
  <body>
    <h2>JSP Implicit Objects</h2>
    <p>Displayed using JSP PrintWriter implicit object:</p>
    <% out.print("Today is:"+java.util.Calendar.getInstance().getTime()); %>

    <h3>Use JSP request object:</h3>
    <form action="request.jsp">
      <input type="text" name="username">
      <input type="submit" value="go"><br/>
    </form>

    <h3>Use JSP response object:</h3>
    <form action="response.jsp">
      <input type="submit" value="Go to Google">
    </form>

    <h3>Use JSP exception object:</h3>
    <form action="divide.jsp">
      <input type="number" name="num1">
      <input type="number" name="num2">
      <input type="submit" value="Divide"><br/>
    </form>
  </body>
</html>
```

## 2. divide.jsp

```
<%--
    Document : divide.jsp
    Created on : 30 Mar, 2022, 10:25:14 AM
    Author : Gaurav
--%>

<% @page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
    <head>
        <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
        <title>JSP Exception Demo</title>
    </head>
    <body>
        <%
            float ans;
            try{
                int num1 = Integer.parseInt(request.getParameter("num1"));
                int num2 = Integer.parseInt(request.getParameter("num2"));
                ans = num1/num2;
                out.println("Result =" + ans);
            }
            catch (Exception e) {
                out.println("An exception occurred: " + e.getMessage());
            }
        %>
    </body>
</html>
```

## 3. exception.jsp

```
<%--
    Document : exception
    Created on : 30 Mar, 2022, 10:27:26 AM
    Author : Gaurav
--%>

<% @page contentType="text/html" pageEncoding="UTF-8"%>
<% @page isErrorPage="true"%>
<!DOCTYPE html>
<html>
    <head>
        <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
        <link rel="stylesheet" href="/style.css">
        <title>JSP Exception Page</title>
    </head>
```

```
<body>
  <div class="divide-page">
    <h1>Error Occurred!</h1>
    <%out.print(exception);%>
  </div>
</body>
</html>
```

#### 4. pageContext.jsp

```
<%--
  Document   : pagecontext.jsp
  Created on : 30 Mar, 2022, 10:20:27 AM
  Author    : Gaurav
--%>

<% @page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
  <head>
    <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
    <title>JSP Page Context Demo</title>
  </head>
  <body>
    <%
      String name=(String)pageContext.getAttribute("user",PageContext.SESSION_SCOPE);
      out.print("Hello "+name);
    %>
  </body>
</html>
```

#### 5. request.jsp

```
<%--
  Document   : request
  Created on : 30 Mar, 2022, 9:51:09 AM
  Author    : Gaurav
--%>

<% @page import="java.util.Set"%>
<% @page contentType="text/html" pageEncoding="UTF-8"%>
<% @page errorPage="exception.jsp"%>
<!DOCTYPE html>
<html>
  <head>
    <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
    <title>JSP Request Object Demo</title>
  </head>
```

```

<body>
  <h2>Displayed using Request Object</h2>
  <%
    String name=request.getParameter("username");
    out.print("Hello, "+name);

    session.setAttribute("user", name);
    pageContext.setAttribute("user",name,PageContext.SESSION_SCOPE);
  %>
  <br/><br/>
  <a href="session.jsp">Use Session Object</a>

  <br/><br/>
  <a href="pagecontext.jsp">Use Page Context Object</a>

  <br/><br/>
  <a href="index.jsp">Back to Home</a>
</body>
</html>

```

## 6. response.jsp

```

<%--
  Document   : google
  Created on : 30 Mar, 2022, 10:02:56 AM
  Author      : Gaurav
--%>

<% @page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
  <head>
    <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
    <title>JSP Response Demo</title>
  </head>
  <body>
    <% response.sendRedirect("http://www.google.com"); %>
  </body>
</html>

```

## 7. session.jsp

```

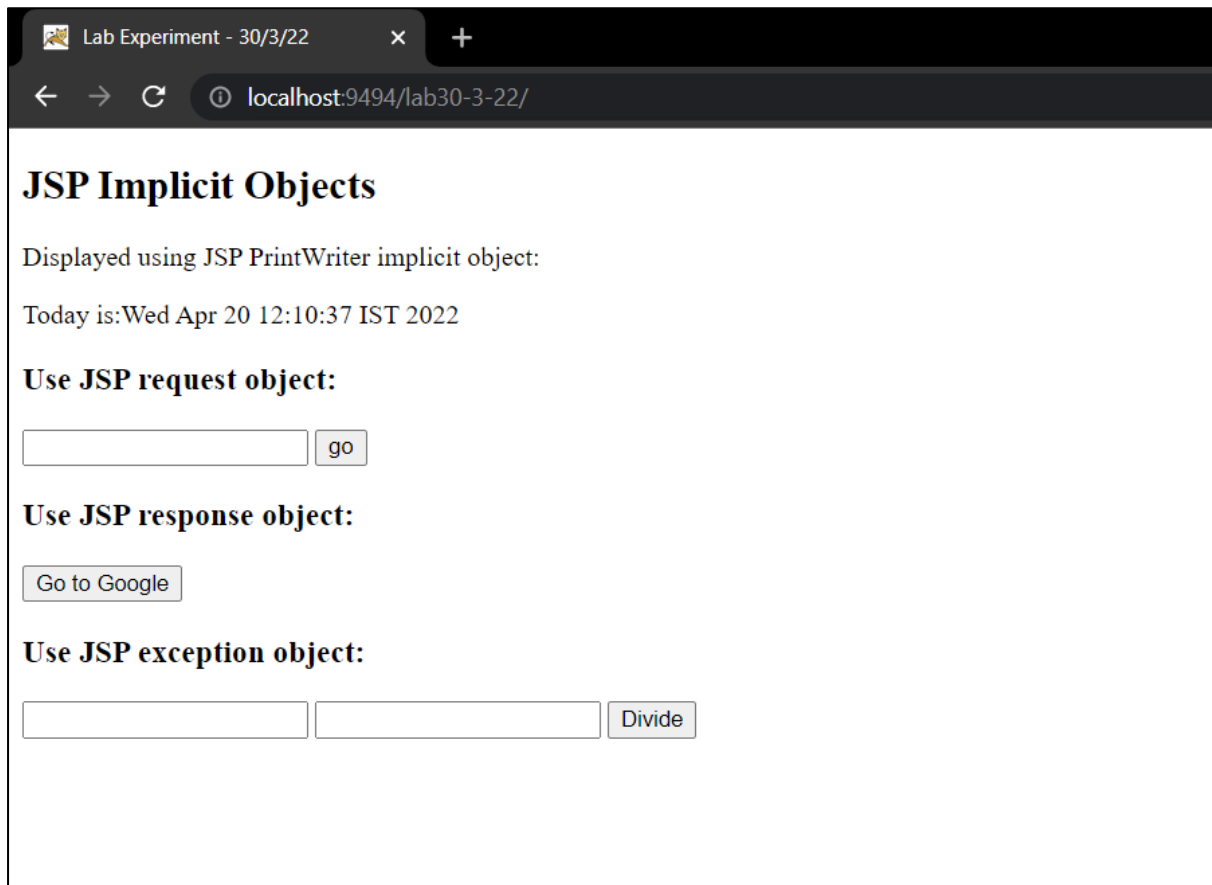

<%--
  Document   : session.jsp
  Created on : 30 Mar, 2022, 10:07:58 AM
  Author      : Gaurav
--%>

```

```
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
  <head>
    <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
    <title>JSP Session Object</title>
  </head>
  <body>
    <h2>Hello, <%=session.getAttribute("user")%></h2>
  </body>
</html>
```

## Output:

### 1. Out Implicit Object and Response Object:

Lab Experiment - 30/3/22

localhost:9494/lab30-3-22/

## JSP Implicit Objects

Displayed using JSP PrintWriter implicit object:

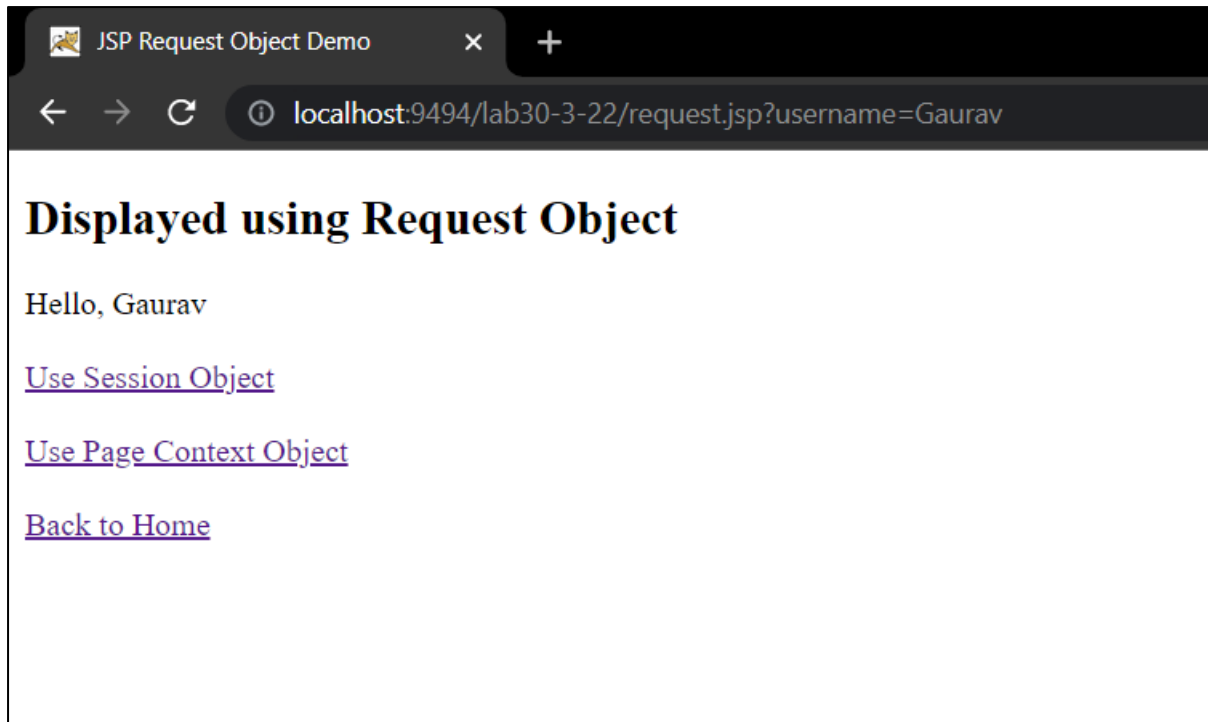

Today is: Wed Apr 20 12:10:37 IST 2022

**Use JSP request object:**

**Use JSP response object:**

**Use JSP exception object:**

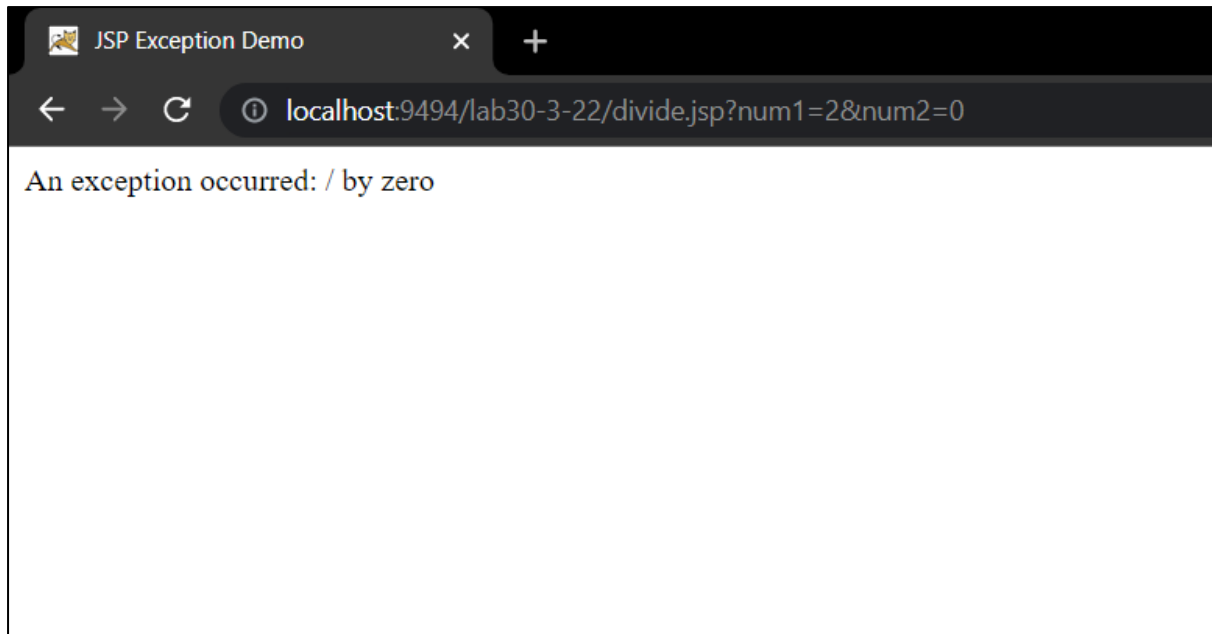

### 2. Request Implicit Object:

### 3. PageContext Implicit Object:

### 4. Exception Object:

### **Conclusion:**

Hence, we have successfully created a JSP script to demonstrate the use of JSP implicit objects.

## Experiment 16

**Objective:** Write a PHP script to:

- 1) Print Sum of Digits
- 2) Number is Prime or Non-prime.

**Software Used:** Visual Studio Code

### **Program:**

#### 1. index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Lab Experiment - 6/4/22</title>
</head>
<body>

  <h2>Get sum of digits: </h2>
  <form action="sumofdigit.php" method="POST">
    <label for="number">Enter a number: </label>
    <input type="number" name="number" id="number">
    <br>
    <input type="submit">
  </form>

  <h2>Check Prime: </h2>
  <form action="isPrime.php" method="POST">
    <label for="number">Enter a number: </label>
    <input type="number" name="number" id="number">
    <br>
    <input type="submit">
  </form>
</body>
</html>
```

#### 2. sumOfDigit.php

```
<!DOCTYPE html>
<html lang="en">
<head>
```

```

<meta charset="UTF-8">
<meta http-equiv="X-UA-Compatible" content="IE=edge">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<title>Sum of Digits</title>
</head>
<body>
<?php
    $num = $_POST["number"];
    echo "Sum of digits of $num = ";
    $sum = 0;
    while($num!=0){
        $digit = $num%10;
        $sum += $digit;
        $num = $num/10;
    }
    echo $sum;
?>
</body>
</html>

```

### 3. isPrime.php

```

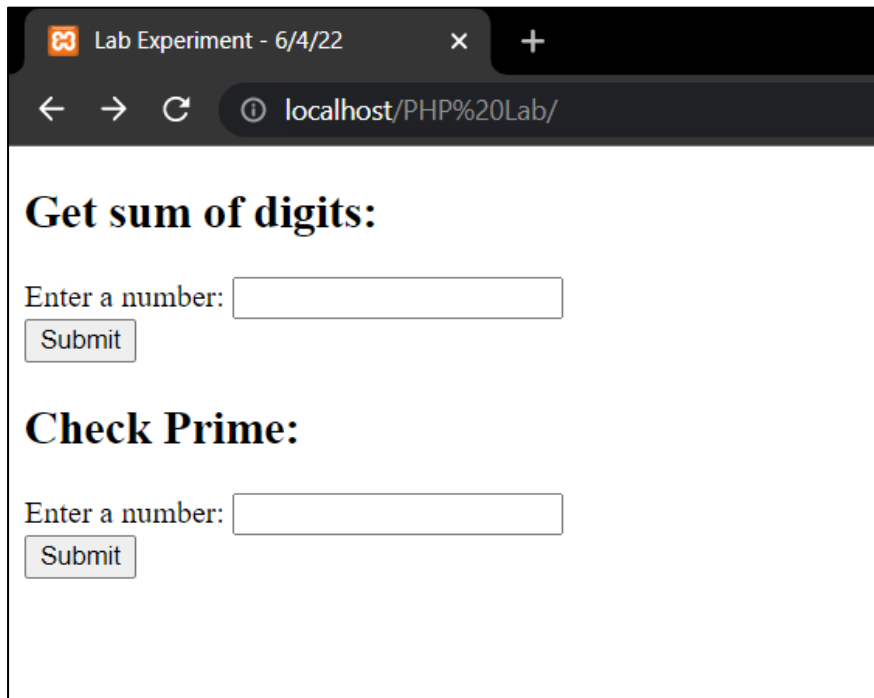

<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta http-equiv="X-UA-Compatible" content="IE=edge">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>isPrime</title>
</head>
<body>
<?php
    $num = $_POST["number"];
    $flag = TRUE;
    for($i=2; $i<$num; $i++){
        if($num % $i == 0){
            $flag = FALSE;
            break;
        }
    }

    if($flag){
        echo "$num is Prime";
    }
    else{
        echo "$num is not Prime!";
    }
?>

```

```
</body>
</html>
```

## Output:

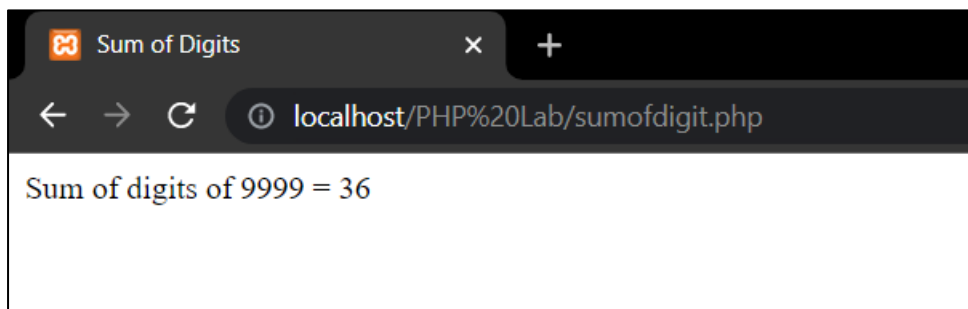

The screenshot shows a web browser window with the title 'Lab Experiment - 6/4/22'. The address bar shows 'localhost/PHP%20Lab/'. The page content includes two sections:

**Get sum of digits:**

Enter a number:

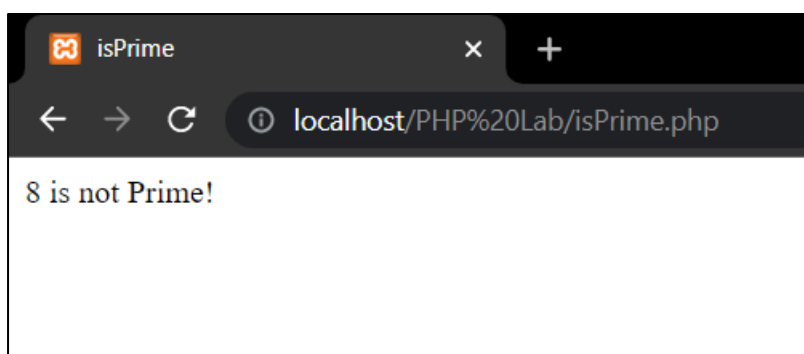

**Check Prime:**

Enter a number:

The screenshot shows a web browser window with the title 'Sum of Digits'. The address bar shows 'localhost/PHP%20Lab/sumofdigit.php'. The page content displays the result of the script:

Sum of digits of 9999 = 36

The screenshot shows a web browser window with the title 'isPrime'. The address bar shows 'localhost/PHP%20Lab/isPrime.php'. The page content displays the result of the script:

8 is not Prime!

## Conclusion:

Hence, we have successfully created a PHP script to print sum of digits and check whether a number is prime or not.

## Experiment 17

**Objective:** Create an eCommerce site using PHP and MySQL.

**Software Used:** Visual Studio Code

### **Program:**

1. index.php

```
<?php

session_start();

include("includes/db.php");
include("includes/header.php");
include("functions/functions.php");
include("includes/main.php");

?>
<!-- Cover -->
<main>
  <div class="hero">
    <a href="shop.php" class="btn1">View all products
  </a>
</div>
<!-- Main -->
<div class="wrapper">
  <h1>Featured Collection</h1>

  </div>

  <div id="content" class="container"><!-- container Starts -->

  <div class="row"><!-- row Starts -->

  <?php
  getPro();
  ?>
</div><!-- row Ends -->
</div><!-- container Ends -->
